

Vacuum Cleaners = 44

Total carbon emissions = **7,920kg** **1,980kg if shared**

Based on an average £100 vacuum cleaner and a CSIRO study that found that for every AU\$1 spent on small appliances 1kg of carbon is released during the entire life cycle of the product, including embodied emissions from manufacture

Lawnmowers = 44

Total carbon emissions = **3,960kg** **990kg if shared**

Based on an average £50 electric lawnmower and a CSIRO study that found that for every AU\$1 spent on small appliances 1kg of carbon is released during the entire life cycle of the product, including embodied emissions from manufacture

Total savings = **8,910kg** the equivalent of taking **2.5 small cars off the road for a year**

Based on an average of 9,000 miles per year taken by a small car which on average emits 390g per mile driven. Data from www.carbonindependent.org/sources_car.htm
